## SKY4 LP DC

Low-profile, simple, and cost-effective WiFi boosting and network

### COMPACT & LOW-PROFILE SYSTEM FOR OUTDOOR WiFi

The WiFiRanger Sky4 LP DC brings you outdoor WiFi signal boosting and a secure wireless network for all computers and devices. While the Sky4 LP DC does not have an indoor router with USB or LAN access, it provides a powerful boost to otherwise weak WiFi Hotspots and a private WiFi network for all wireless devices. The Sky4 LP DC brings in distant WiFi from up to 2500 feet away. Easily hook the Sky4 LP DC up to power by putting its positive and negative leads into a 12V fused power switch for a clean and simple installation. The “LP” version of the Sky4 is only 2.2 inches tall and is designed for applications that require minimal overhead clearance or a small footprint that is easily concealed.
